

Attachments for Order Pickers

Order Picker Attachment - Order picking is likewise known as order preparation operation. This is among the chief processes in a warehouse and consists of people referred to as order pickers, collecting and taking articles in a certain quantity previous to shipment in order to accomplish client orders. Order picking is a basic warehousing method. The effectiveness in which this particular job is completed can be directly related to a supply chain's productivity. Thus, order picking is among the most controlled logistic processes. Order picking falls within the category of the warehouse management system.

There are some particular kinds of order picking. The main kinds include: pick to box method, wave picking method, piece picking or picker to part method, zone picking method and sorting systems method.

The pick to box method comprises the order picker filling the box with the items from his or her station. The box then moves to other picking locations until the client order is finish. In this particular process, there is no movement of the order picker staff. In the wave picking method, the order pickers move around to collect the needed products for some orders. The picker to part method or piece picking is similar where the order picker or pickers move to gather the items needed but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, stuff are brought to the order picker by an automatic system like for instance a conveyor system or an automatic storage system. In the zone picking method, each order picker is assigned to one specific area. They are responsible for only realizing order picking within this specific zone.
