

Fork Positioner for Forklift

Fork Positioner for Forklift - The fork positioner is actually a hydraulic apparatus which could allow the driver to be able to maneuver the lift truck without leaving the seat. They are made out of top quality materials and are intended to endure the most demanding procedures and work surroundings. Side shifting models have the extra ability to be able to laterally position the entire load or the arms so as to facilitate more precise carrying and position in a quicker and much more efficient method.

The blade pocket is somewhat unique and can enable the operator to be able to securely sway the forks into position without any fear of destroying the positioning cylinders. This could allow the driver the alternative to be able to perform independent or simultaneous fork movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into fork positioners on available units.
